Company profile:

We are one of Europe's leading companies in the pipe support sector. In addition to a wide-ranging programme of pipe supports, we specialise in standard pipe supports for extremely cold products e.g. LNG, and high-temperature pipes for the power plant industry. In addition to our own comprehensive programme we also manufacture according to well-known industry standards.

On request, our engineers will develop tailor-made pipe supports which meet the highest technical standards. While we are developing solutions to your problems, we keep you informed and accompany the project right up to assembly. This means that on-going quality is guaranteed at all times.

Our modern production halls and our mostly new machinery are a pre-requisite for high quality manufacture according to schedule. Our dedicated paint shop also ensures a high level of quality and delivery on time. In the spring supports and constant supports sector, we make use of ultra-modern, computer-aided test equipment which ensures optimal quality.

Manufacturing- / delivery programme:

- Standard tube carriages for insulated and non-insulated pipelines
- Clamping systems for standard tube carriages
- Clamping systems for non-insulated pipelines
- Pipe support systems for special applications

- Spring hangers, spring supports
- Constant hangers, constant supports
- Sway struts, sway and shock suppressors, accessories
- Pipe drop hangers

- Height adjustable pipe carriages
- Pre-insulated low temperature supports, cryogenic supports
- PTFE supports and PTFE sliding plates

- Clean zone pipe carriages
- Roller supports and roller support carriages
- High temperature pipe supports

- Pipe carriages for non-metallic pipelines
- Accessories .
