## **Company profile:**

The ELYSATOR Engineering GmbH was founded in the 1950 and since that time they work in the field of process engineering and water systems. The company is represented in over 20 countries and is specialized in the production of filter units, which are used to purifying drinking water.

Technically advanced production plants, innovative products, uninterrupted logistics and highest possible quality standards leads the company to market leadership in Switzerland. ELYSATOR develops water from a raw material to a technical fluid.

## **Manufacturing- / delivery programme:**

Products from ELYSATOR Engineering AG are used to clean and treat water circuits for technical purposes, such as those found in heating and cooling systems, as well as in engine circuits on ships and in power plants.

## **Product Categories**

### **PUROTAP**

complete desalination of heating water - the efficient solution against corrosion and lime

### **ELYSATOR**

corrosion protection of recirculation water systems by using a sacrificial anode to extract oxygen, acid and aggressive salts from the water

### **Sanol**

the cleaning and dispersing agent assists professionals in flushing and cleaning heating and cooling systems in a very efficient and safe manner

### **Sorbox**

is a revolutionary yet simple and low maintenance water filter for any domestic hydronic heating system

### **Water analyses**

measurement systems to check the fill water quality of the heating system

### **PUROCLEAN**

filters lime and aggressive substances such as sulfates, nitrates and chlorides from the tap water

The products improve effectively and reliability of modern technical facilities and are meeting high ecological standards.
